

# CONTENTS

## 1

### INTRODUCTION

<b>1.1 EVOLUTION OF TREATMENT SYSTEMS</b>	1
<b>1.2 TREATMENT TECHNOLOGIES</b>	2
Vegetated swales and strips	2
Dry basins	2
Wet basins	2
Constructed wetlands	2
Vortex separators	2
Oil/water separators	3
Inert media filters	3
Sorpitive media filters	3
Drain inlet devices	3
Infiltration systems	3
<b>1.3 MANAGEMENT APPROACH TO STORMWATER TREATMENT</b>	3
Volume goal	3
Targeted pollutants	4
Performance goal	5
Maximum Extent Practicable	6
<b>1.4 UNIT PROCESS AND OPERATIONS</b>	6
<b>1.5 PRINCIPLES AND THE BOOK'S ORGANIZATION</b>	8

## 2

### STORMWATER QUALITY

<b>2.1 INTRODUCTION</b>	11
<b>2.2 CHARACTERISTICS OF INTEREST</b>	11
Regulated constituents	11
Understanding system performance	12
Understanding variability	13
<b>2.3 SOURCES OF POLLUTANTS</b>	13
Atmospheric deposition	13
Litter and leaf fall	15
Landscape management	15
Urban wildlife and pets	15
Transportation vehicles	15
Pavement deicing	16
Pavement	16
Building exteriors	16
Industrial businesses	17

Commercial businesses	17
Residential activities	17
Site development	17
Public infrastructure	17
<b>2.4 FACTORS CAUSING VARIABILITY</b>	17
Land use type	17
Site activities	20
Off-site activities	20
Source control practices	20
Traffic volume and other roadway factors	21
Climate and seasonal weather	23
Hydraulics	25
Stormwater chemistry	25
Study structure	25
<b>2.5 CHEMICAL CHARACTERISTICS</b>	25
Detection Frequency	26
Concentrations	26
Loadings	30
Toxicity	31
<b>2.6 CHARACTERISTICS OF SOLIDS</b>	32
Gross Solids	32
Suspended solids	33
Size and mass distribution	33
Settling velocity distribution	35
Surface area distribution	35
Settling characteristics	36
Chemical concentrations	36
Nature of metals bonding	39
Dissolved Solids	39
Complexation	39
Speciation	39
Dispersed Solids	41
Relationships	41
<b>2.7 PATHOGENIC ORGANISMS</b>	42
<b>2.8 POLLUTANT ACCUMULATION AND WASHOFF</b>	43
Accumulation-washoff processes	43
First flush	44
Method to estimate concentrations and loads	45
<b>2.9 APPLICATION TO STORMWATER TREATMENT</b>	48

**3****CHEMISTRY**

<b>3.1 INTRODUCTION</b>	49
<b>3.2 BASIC CONCEPTS</b>	50
Solutions	50
Concentration units	51
Density and specific gravity	51
Ionic strength, activity coefficient, and conductivity	51
Diffusion	52
Radicals and ligands	52
Classification of solids	53
Polarity and hydrophobic effect	53
<b>3.3 SYSTEMS AND PROCESSES</b>	54
pH	54
Inorganic chemistry of water	54
Alkalinity-acidity-buffering capacity	54
Carbonate system	55
Hardness	56
Solubility, precipitation, and dissolution	56
Types of reactions	58
Oxidation-reduction reactions	58
Hydrolysis	59
Photoreaction	59
Sorption	60
Isotherms	60
Kinetics	60
Partition coefficients	61
Volatility	61
<b>3.4 ORGANICS</b>	62
Natural organic matter	62
Anthropogenic organics	62
Measurement	65
<b>3.5 METALS</b>	65
<b>3.6 COLLOIDS</b>	67
Nature of colloids	67
Colloidal suspension	67
Sorption to colloids	68
<b>3.7 APPLICATION TO STORM WATER TREATMENT</b>	69

**4****CLIMATE**

<b>4.1 INTRODUCTION</b>	71
<b>4.2 CLIMATIC REGIONS</b>	71
Cold regions	72
Issues	72
Strategies	78
Four flow types	79
Semi-arid regions	80

**5****FLOW OF WATER**

<b>5.1 INTRODUCTION</b>	81
<b>5.2 PROPERTIES OF WATER</b>	82
<b>5.3 FLOW REGIMES</b>	82
<b>5.4 HEAD AND HEAD LOSS</b>	84
<b>5.5 FLOW THROUGH CHANNELS</b>	85
Equations of flow	85
Resistance to flow in vegetated channels	86
Turbulence in vegetated channels	88
Channel erosion	89
<b>5.6 FLOW THROUGH BASINS</b>	89
Ideal and non-ideal flow	89
Mathematical simulation models of non-ideal flow	91
Longitudinal dispersion model	91
Tanks-in-series model	92
Multi-dimensional modeling	93
Unsteady flows	93
Effect of basin configuration	94
<b>5.7 FLOW THROUGH MEDIA</b>	94
<b>5.8 RELATED CONCEPTS</b>	95
Routing	95
Energy dissipation	96
Stratification	96
Thermal effects	98
Wind	99
Bypass	99
<b>5.9 APPLICATION TO STORMWATER TREATMENT</b>	100
Grass swales and strips	100
Wet basins	101
Filters	102
Climatic considerations	102
Wet basins	102
Grass swales and strips	104

**6****REACTOR KINETICS**

<b>6.1 INTRODUCTION</b>	105
<b>6.2 REACTION ORDER</b>	105
What is a reaction order	105
Test to determine the order	107
Effect of temperature on the reaction rate	107
Background concentration	107
Integrating hydraulic efficiency	108
Ideal condition	108
Non-ideal condition	108
<b>6.3 EXPERIENCE FROM WASTEWATER TREATMENT</b>	109
<b>6.4 APPLICATION TO STORMWATER TREATMENT</b>	110

## 7

**GRAVITY SEPARATION**

<b>7.1 INTRODUCTION</b>	111
<b>7.2 SETTLEABLE SOLIDS</b>	112
<b>7.3 TYPES OF SEDIMENTATION</b>	112
<b>7.4 DETERMINING SETTLING VELOCITIES</b>	113
Stokes Law	114
Settling column method	117
<b>7.5 SETTLING WITH INTERMITTENT FLOWS</b>	117
Dynamic settling	117
Quiescent settling	119
Factors affecting the relative significance of each	119
Dry basins, grass swales and strips	120
Resuspension	120
<b>7.6 LAMINAR SETTLERS</b>	121
<b>7.7 VORTEX SEPARATION</b>	122
<b>7.8 FLOTATION</b>	124
Solids lighter than water	124
Solids denser than water	125
<b>7.9 EFFECT OF NON-IDEAL CONDITIONS</b>	125
Turbulence	125
Uneven solids distribution	126
<b>7.10 EXPERIENCE FROM WATER AND WASTEWATER TREATMENT</b>	126
Consideration for non-ideal conditions	126
Inlet and outlet design	127
<b>7.11 APPLICATION TO STORMWATER TREATMENT</b>	129
Pre-engineered wet vaults and vortex separators	129
Basins	133
Performance	133
Design elements	133
Grass swales and filter strips	135
Maintenance	136
Climatic considerations	136
Cold regions	136
Semi-arid regions	138
<b>7.12 SIZING A BASIN</b>	138
Wet basins	139
Extended detention basins	143
Grass swales and strips	145
Climatic considerations with sizing	146

## 8

**PRECIPITATION**

<b>8.1 INTRODUCTION</b>	147
<b>8.2 CHEMICAL PRECIPITATION</b>	148
Metal hydroxide formation	148
Dissolved phosphorus removal	148
Dissolved metals removal	149
The engineered system	149

<b>8.3 NATURAL PRECIPITATION</b>	149
Wet basins	149
Filtration systems	150
<b>8.4 EXPERIENCE FROM WATER AND WASTEWATER TREATMENT</b>	150
<b>8.5 APPLICATION TO STORMWATER TREATMENT</b>	151
Chemical precipitation	151
Natural precipitation	151
<b>8.6 SIZING A PRECIPITATION BASIN</b>	152

## 9

**COAGULATION**

<b>9.1 INTRODUCTION</b>	153
<b>9.2 DESTABILIZATION</b>	154
Stable suspensions	154
Mechanisms of destabilization	155
Coagulants	156
Coagulant mixing	156
<b>9.3 FLOCCULATION</b>	156
Transport processes	156
Mixing	157
<b>9.4 FACTORS AFFECTING COAGULATION</b>	157
Solids characteristics	157
Zeta potential	157
Water chemistry	158
Water temperature	158
Coagulant type and dosage	158
Mixing	158
<b>9.5 DETERMINING OPTIMUM CONDITIONS</b>	159
Coagulation tests	159
Metering	160
<b>9.6 ELECTROCOAGULATION</b>	160
<b>9.7 NATURAL COAGULATION</b>	160
<b>9.8 EXPERIENCE FROM WATER AND WASTEWATER TREATMENT</b>	161
<b>9.9 APPLICATION TO STORMWATER TREATMENT</b>	161
Chemical coagulation	161
Natural coagulation	163
<b>9.10 SIZING A COAGULATION SYSTEM</b>	163
Coagulant mixing unit	163
Flocculation unit	164
Paddles	164
Baffled channel	165
Pipe	165
Air injection	166
Filter bed	166
Separation unit	166
Climatic considerations in sizing	166

**10****INERT MEDIA FILTRATION**

<b>10.1 INTRODUCTION</b>	167
<b>10.2 CLASSIFICATION OF FILTERS</b>	168
<b>10.3 PRETREATMENT</b>	169
<b>10.4 MEDIA</b>	169
<b>10.5 MEDIA PROPERTIES</b>	170
Hardness	171
Density	171
Sphericity	171
Size and size distribution	171
Porosity	172
Bed void ratio	172
<b>10.6 MECHANISMS OF SOLIDS REMOVAL</b>	172
Principal mechanisms	172
Factors affecting the role of each mechanism	174
Factors affecting performance	176
Modeling performance	177
<b>10.7 OPERATING HEAD</b>	178
<b>10.8 UNDERDRAIN SYSTEM</b>	179
<b>10.9 GEOFABRICS</b>	180
<b>10.10 FILTRATION BY VEGETATION</b>	181
<b>10.11 EXPERIENCE FROM WATER AND WASTEWATER TREATMENT</b>	181
Media properties	181
Performance	182
<b>10.12 APPLICATION TO STORM WATER TREATMENT</b>	182
Configurations	182
Performance	187
Fine-media filters	187
Coarse-media filters	190
Media specifications	190
Maintenance	191
Climatic considerations	192
Cold regions	192
Semi-arid regions	192
<b>10.13 SIZING A SLOW-RATE FILTER</b>	192
Pretreatment	192
Area based on flow rate	193
Area based on solids accumulation	194
Climatic considerations with sizing	196
Cold regions	196
Semi-arid regions	197

**11****SORPTIVE MEDIA**

<b>11.1 INTRODUCTION</b>	199
<b>11.2 CLASSIFICATION OF SORPTION SYSTEMS</b>	201
<b>11.3 PRETREATMENT</b>	201
<b>11.4 MEDIA</b>	201
Sand	202

Amended sand	202
Activated carbon	202
Peat	204
Leaf compost	206
Zeolite	206
Activated alumina	207
Polypropylene and granular polymer	207
Resins	207
Other media	207
<b>11.5 SORPTION PROCESSES</b>	208
Media surface area	208
Porosity and pore structure	208
Water chemistry	209
Selectivity	210
Sorption Rate	210
Other processes	211
<b>11.6 MEDIA CAPACITY</b>	212
Sorption isotherms and total capacity	212
Operating capacity and breakthrough curves	213
Media replacement	215
<b>11.7 EXPERIENCE FROM WATER AND WASTEWATER TREATMENT</b>	215
<b>11.8 APPLICATION TO STORMWATER TREATMENT</b>	215
Configurations	215
Concepts for sorption	215
Drain inlet inserts	216
Performance	218
Operating capacity	220
Media specifications	220
Maintenance	222
Climatic considerations	222
Cold regions	222
Semi-arid regions	223
<b>11.9 SIZING A SORPTIVE MEDIA FILTER</b>	223
Determining media volume	223
Climatic considerations with sizing	223

**12****SOIL PROCESSES**

<b>12.1 INTRODUCTION</b>	225
<b>12.2 CHARACTERIZING SOIL</b>	226
Creation	226
Composition	228
Classification	229
Saturated soils	230
Unsaturated soils	234
<b>12.3 SOIL PROCESSES</b>	235
Phosphorus	235
Sorption mechanisms	235
